- Exposure to “big-6” Canadian banks using **mean reversion strategy** with monthly rebalancing (see “What is Mean Reversion?” below)
- **Monthly distributions**
- Each month, **HCB** will rebalance and overweight the three most recent underperformers (~80%) and underweight the three most recent outperformers (~20%)
- **HCB’s mean reversion strategy** seeks to provide the following benefits:
 - Potential for **higher long-term returns** by capitalizing on mean reversion tendencies of the sector

INVESTMENT OBJECTIVE

The investment objective of HCB is to generate long-term returns consisting of long-term capital growth as well as regular dividend income by investing in an equity portfolio of Canadian banks. HCB will employ a proprietary rules-based portfolio rebalancing methodology in an effort to improve the return potential of the ETF.

WHAT IS MEAN REVERSION?

Over the years, buying the laggards and selling the outperformers has been one of the most popular themes in Canadian bank investing on the belief by investors that Canadian bank stocks will – over time – generate similar returns. This is called “mean reversion”.

HCB attempts to take advantage of these tendencies by rebalancing the portfolio monthly and investing 80% of the portfolio in the 3 banks which have recently underperformed, and 20% in the 3 banks which have outperformed.
